**Transforming business
with innovation**

Partner Provisioning Engine

Invenica worked with Vodafone to provide a fresh approach in delivering premium content and service offerings to their customers, all via a convenient application.

Vodafone wanted to enhance its high quality customer engagement service by offering premium content in a way that would be instantly manageable for both supplier and end user.

Invenica helped to develop and deliver the Vodafone Partner Provisioning Engine, an Application Programming Interface and web User Interface which efficiently integrates new partners end-to-end. Enabling customers to easily and conveniently subscribe to must-have content by leveraging their existing operator data and billing solutions.

/What we did

Invenica supported the project with delivery management through technical product ownership, programme governance and integrated application development.

The Invenica team were able to bring together differentiating services within local markets, and across multiple platforms, to create the solution. The Partner Provisioning Engine ensured a comprehensive premium content service for the consumer and a reconciled traceability for Telecommunications Over-The-Top Services.

/What we delivered

Our experience of providing solution design and implementing enterprise software architecture with management of third parties, delivered a successful project:

- ///** Providing sustained speed to market and ensuring scalability through the application, gathering multiple Telco-OTT services within one Charge To Bill package.
- ///** Integrating local markets and Telco-OTT services through development of large scale Java systems.
- ///** Supplying Domain Specific Language to model customer offers, ultimately securing a business self-serve functionality.

/About Invenica

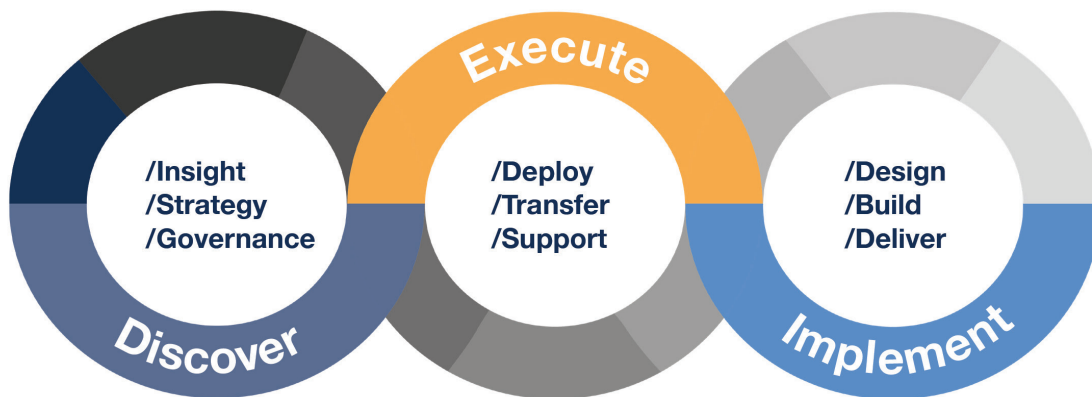

Invenica is an independent technology development and consultancy company. We use technology innovation to solve difficult problems for our clients.

We have deep technical and industry knowledge, and a breadth of experience delivering complex enterprise projects. We work for global blue-chip companies, delivering mission critical solutions in the most demanding of environments. We help our clients develop a clear IT strategy – working with them on POCs and Prototypes that deliver a tested and “fast tracked” approach.

/Discover The Possible

We launched our “**Discover the Possible**” program in January, and over the coming year, we will be exploring the challenges and opportunities of emerging technology. We will be separating the fact from the fiction, translating the buzz words and jargon into simple plain language, and analysing real business use cases. Our team will be collaborating with our clients, partners and subject matter experts across the markets creating whitepapers, webinars and industry articles to spark discussion and debate.

/Delivery Framework

We build solutions that perform in the most demanding of client environments and have a rigorous testing and quality assurance process. Our clients trust us to deliver a “right first time” deployment and migration path for the solutions being developed.

We have just published our Blockchain whitepaper and Retail industry article, as part of our Discover The Possible program. To download the content, visit www.invenica.com/discover
